Principles of Responsible Innovation

Guiding Questions

Human-Centricity

- ☐ Do we understand how the system can assist us? Or the organization?
- ☐ Does the system align with the organization's ethical principles?
- ☐ Does the use case have positive intent for society?
- ☐ Who might be harmed by the use of this system?
- ☐ What is the impact on individuals and society over time?

Inclusivity

- ☐ Does the solution perform differently for different groups? If so, why?
- ☐ Do people with similar characteristics experience similar outcomes? If not, why?
- ☐ Are all for whom the solution is intended equally prioritized?
- ☐ How might the training data impact the inclusivity of a generative AI response?
- ☐ Are all members of our community equally prioritized when selecting a use case or designing a product?
- ☐ In situations where algorithms are used to determine access to resources and ability to exercise freedoms and rights, how can we ensure that algorithms are not learning historical and current patterns of discrimination?
- ☐ Is it appropriate to use sensitive variables or their proxies, or both, in the model?

Accountability

- ☐ How are outcomes monitored, and can they be overridden and corrected?
- ☐ Can the end users and those impacted raise their concerns for remediation?
- ☐ How can we ensure that the tool does not promote misinformation or perpetuate negative topics?
- ☐ Is the organization familiar enough with the use case to spot errors?
- ☐ When are humans involved in the decision-making process? Should that change?

Privacy & Security

- ☐ Is there a risk of sharing any private or sensitive information, intellectual property, or other information that should not be shared?
- ☐ What legal and regulatory compliance measures apply?
- ☐ How might cyber or adversarial attacks exploit this solution?

Robustness

- ☐ Was the system sufficiently trained on data for this specific use case?
- ☐ Has the creator of the system documented any limitations, and is the use case within those limitations?
- ☐ Can solution results be reliably reproduced?
- ☐ What guardrails are required to ensure safe operation?
- ☐ How might the solution go awry and what should be the response?

Transparency

- ☐ Can the responses of the system be interpreted and explained by human experts in the organization?
- ☐ Should the organization indicate when AI or AI-created content are used?
- ☐ Would it be clear to people if they were interacting with a bot?
- ☐ Would it be clear to people how their data will be used or shared?
